GREENBIT FOR PERMANENT PRIMARY ROADS:

GreenBit is a patented natural binding agent combined with an emulsified bituminous product to create a durable gravel road sealant. **GreenBit** offers the perfect solution for road establishment and dust control on primary or secondary haulage roads.

It is an environmentally safer alternative to purely chemical-based products for permanent gravel roads on mines and in residential areas.

GreenBit contains around 70% all-natural binders derived from wood extracts, a by-product of the paper and pulp industry, which has a negative carbon footprint due to carbon sequestration by trees. The balance contains an emulsified bitumen product and natural polymers.

GreenBit has been extensively tested and used on both public and mine haulage roads. It produces a strong base with a smooth and durable surface. **GreenBit** is a water-soluble and easy-to-apply product that improves tyre grip whilst reducing the need for constant grading and watering of the roads, thereby saving on precious water resources and overall costs.

ADVANTAGES:

- Water savings
- Removes the need for constant grading and watering
- Dust-free road surfaces
- Improves grip
- Low road maintenance cost
- Water soluble - easily applied
- Feasible economical alternative to asphalt/tar
- Reduces rolling resistance
